

# STAFF STORIES OF THE QUARTER

## 1st Quarter 2018

Patient-Centered

Collaboration

Integrity

Transparency

Stewardship

### Beth Harrison

Nurse Manager, Telemetry. Beth has done a tremendous job with her work on the Stroke Accreditation. Her staff are very engaged and she has amazing community involvement. She is driven by her passion to do better for our patients and because of her efforts, we are doing that.

### Christy Neal

Supervisor, UHC Radiology. Christy was instrumental in assisting with all the ground work needed to implement the Heart Scans at Union Clinton. She completed peer-based research, worked with her colleagues at Union Terre Haute, attended meetings, followed up with finance, and assisted with the presentation of the business plan that was accepted. In addition, Christy led the UHC Easter Egg Hunt festivities and was largely responsible for the success of this event.

### Karen Orndorff

RN Case Manager, Wound Center. Karen Orndorff has been taking, on her own time, food out to a patient who has little money. This patient barely has enough gas money to come and see us weekly at the center and has issues with getting proper food. Karen has also made a patient a quilt, which was all purple because it was her favorite color. She also recently made a quilt for a patient when her mother died and took it to their home personally.

### Meghan Whittaker

Educator, Radiology. Meghan recently helped receive a grant to obtain new wheelchairs that are more ergonomically sound for the transporting staff. She also received a Safety-First Grant which helped bring in an updated MRI Conditional Transport Cart. Meghan organized and helped support our recent Safety Fair at all 3 locations.

### Danielle Baysinger

RN, ICU. Danielle was recently on vacation in Roatan, an island in Honduras. While she was enjoying her time on the beach she heard someone choking and someone yelling for help. She ran over and the man was turning purple and she could not feel a pulse. She began compressions until the medics arrived. The medics on the island did not know how to work the AED machine. Danielle taught them how to use the machine and how to do compressions correctly. They finally got a steady pulse and the man began waking up. Danielle stepped up beyond the wall of Union Hospital to affect the lives of others.

### Kayelene Card

RN, Pre-Post/Cath. Kayelene takes the time to explain everything regarding our processes and their discharge to patients in less than optimal situations. She is the epitome of professionalism.

### Melissa Freyberger

RN, 4EA. The same day a patient was diagnosed with stage 4 cancer she found out her son had passed away. She was not able to attend the services because of her condition. Melissa came in on her day off and facetedimed the viewing of the patient's son.
